

```
std::enable_shared  
_from_this< TangBase >
```

```
std::map< std::type  
_index, std::map< std  
::string, std::pair< size  
_t, Tang::NativeBoundFunction > > >
```

objectMethods

Tang::TangBase

The diagram illustrates the relationship between the Tang::TangBase class and two standard C++ containers. Tang::TangBase is represented by a grey rectangular box on the right. Two white rectangular boxes are on the left. The top box contains the code 'std::enable_shared_from_this< TangBase >', and the bottom box contains 'std::map< std::type_index, std::map< std::string, std::pair< size_t, Tang::NativeBoundFunction > > >'. A solid blue arrow points from Tang::TangBase to the top box. A dashed purple arrow, labeled 'objectMethods', points from Tang::TangBase to the bottom box.
